Tutorial SAS 9.2 & JMP 9.1 About  
This Tutorial Abstract Many of the  
questions asked in Statistical  
Discovery pertain to identifying the  
differences in variance of one  
experimental group or another.

Variance is a measurement of the  
spread of a set of data about a central  
location or mean. One way to define  
variance is by saying that variance is  
the average difference from the mean  
of the squared distances from each  
data point to the mean. In other words,  
variance is the average of the squared  
distances from each data point to the  
mean. The more variance there is in

---

the data set, the more spread or spread the data points have. The SAS JMP Statistical Discovery is a companion product to SAS 9.2 and SAS 9.1. This product brings the power of the SAS Software to a statistical discovery tool that can be used in conjunction with SAS software for analysis of data. The SAS JMP Statistical Discovery tool enables users to perform Statistical Discovery or Classification Analysis on data sets. By combining the power of SAS and JMP, data analysts will have the power to perform statistical analysis to identify differences between groups of their data. SAS

---

JMP Statistical Discovery allows users to use the Statistical Discovery function in JMP as well as the SAS Software to perform statistical analysis on large data sets with emphasis on identifying differences between groups. SAS JMP Statistical Discovery allows users to perform classification and regression analysis. Statistical Discovery allows users to perform statistical analysis on data sets using SAS 9.2 or SAS 9.1 and JMP 9.0. Statistical Discovery allows users to perform statistical analysis on data sets to identify differences between groups in data. Statistical Discovery is

---

primarily used to perform Classification Analysis on data sets and it is a powerful tool for data classification. Statistical Discovery uses JMP for performing Classification Analysis on data sets. The SAS JMP Statistical Discovery tool is a powerful statistical discovery tool for performing statistical analysis on data sets. A JMP Statistical Discovery allows users to perform statistical analysis on data sets using SAS 9.2 or SAS 9.1 and JMP 9.0. Statistical Discovery allows users to perform classification analysis on data sets. Statistical Discovery provides

---

powerful data analysis tools for  
classifying and regression analysis on  
data sets using SAS 9.2 or SAS 9.1 and  
JMP 9.0. Introduction SAS Statistical  
Discovery (JMP, 2000) is a JMP (
